°1 **CABLE WINCH, ANCHOR (FOR WINCH)** — As there aren't too many trees in the desert, experienced drivers tend to use the anchor and the winch to get themselves out of the uncomfortable situation of being stuck in the sand. °2 **GLOBAL POSITIONING SYSTEM** — The GPS was first invented by the US military and is accurate to within a meter. °3 **ADDITIONAL ENGINE COOLING WATER** — Warm up, cool down, and save water for your own use. °4 **ADDITIONAL WATER TANK** — A reason for going back into civilization is often the lack of access to water. °5 **OUTDOOR SHOWER** — A luxury item in the desert

if you have enough water. °6 **PROFESSIONAL COOLING BOX (12-/24-VOLT)** — An absolute essential for food that needs to be cold. °7 **SATELLITE PHONE** — For emergency calls. °8 **SAND LADDER** — To be placed under your tires when your car gets stuck in the sand. °9 **SPADE** — When your tires start digging deep into the sand you need to get ground clearance to start off again. °10 **SUNSCREEN** — The sun is out. °11 **FIREWOOD** — Not many trees around and it gets very cold at night so you better collect as much wood as you can get. °12 **SOLAR PANELS** — Great invention for saving battery capacity.
