

CAMPING

The romance of sleeping out in the wild will never fade. There is something hugely relaxing about setting up camp and foraging for firewood, or sitting out in the open to watch the sun set. Self-sufficiency is key and there are plenty of innovative companies producing just the gadgets you need.

AMOK HAMMOCK

Norwegian outfit Amok excels in cutting-edge camping technology and its hammocks are no exception. The *Draumr 3.0 overnight camping hammock* takes up about the same space in a backpack as a sleeping bag, making it an easy choice for hikers, trailers, and wanderers. As

dusk starts to fall, the hammock is easy to assemble wherever you like in only a matter of minutes. Its highly functional design is based on a sophisticated system of suspension straps, carabiners, and tree huggers. All you need to get started is a pair of trees from which to suspend it.

THE MUNCHER

A must-have piece of kit for every adventurer, *The Muncher*, made by Full Windsor, is an incredible, versatile, and lightweight tool packed with no fewer than 10 functionalities. Besides a spork and butter knife are can opener, bottle opener, peeler, fire starter, cord cutter, flathead screwdriver, and more, all made from superlight titanium.

FIELD RUGS

These quality *Field Rugs* from British outfit Moorswood use the finest natural fiber materials to make them durable and rugged. A wax-cotton base makes them suitable for all kinds of terrain and they are finished in traditionally handwoven wool tweed.

NOMHAM BACKPACK

Inspired by the art of origami, the *Nomad Hammock* is the ultimate two-in-one camping accessory. On the one hand it offers a fully functional backpack with a 20-liter capacity. Just pack all your kit in the Smar Bag within. Take the Smar Bag out, however, and the backpack itself converts into a comfy hammock—easy to assemble for instant relaxation. The whole thing is made from a Cordura® material that is wear-resistant and durable. And a clever system of Velcro® fastening makes it easy to use in all outdoor activities.

LUMINISER LANTERN

Here is a light source that can be used safely inside and out. The technology relies on thermoelectricity to transform the heat energy from a single tea light candle into powerful LED. A single candle will give you five hours of light. It is also lightweight, rugged, and built to last.

MITI COOKING TOOL

This lightweight cooking tool from Sportes makes it easy to get cooking. All you need is a log from which to make the base. Once split in four vertically, the log provides a sturdy set of legs on which to attach the *MITI XL plate*. Secure it in place using four steadying steel rods and you are ready to light your fire.
