

Creating A Pathway
Towards Global
Decarbonization

Air Applications

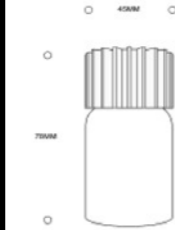

● **CI** New solutions for industry-wide innovation.

Climate change stands before us as the most pressing and complex challenge our society faces. Carbon, the building block of life, is increasingly being used in the decades worth of new and complex CI for more innovative applications.

Luckily, our planet's most abundant resource, air, can and will be its greatest ally. The technology we've developed through carbon conversion and utilization will serve as the blueprint for industry-wide decarbonization, leaving us from over a century-long dependency on fossil fuels.
