

GREENHOUSE GROWERS

Climate change is threatening the viability of millions of small farms in India, but an innovative new greenhouse solution is transforming the lives of vulnerable farmers.

For small-scale farmers in dry regions of India, water supply can too easily mean the difference between life and death. The long droughts, extended heat waves, and unpredictable rainfall brought about by global warming have proven disastrous for many of India's 146 million small farms, 85 percent of which now lose more money than they make. ➤

01 Yadav Bhavanth's nieces and nephew get ready to take produce to the local market.

02 Bhavanth and his wife, Bujji, grow tomatoes in their greenhouse, located on the family farm near Laxmapur village in Telangana state. Bhavanth was the first to purchase a greenhouse from Kheyti.
