

Once at the terminal, the containers are transferred to the New York & Atlantic Railway, ready to make their way to their various destinations in the city.

*The New York & Atlantic Railway's freight trains also carry goods through the East New York Tunnel in Brooklyn.*

Some of the containers are filled with plastics and steel used to build parts of the subway.

They also carry other kinds of construction materials that are to be used in major building projects across the city, such as the renovation and expansion of Penn Station, one of New York's most famous train stations.

Other goods being transported include food, paper products, sand, minerals, stone, clay, glass, and fuel.
