

## THE HOUSE BOX

After being continually weighed down by the harsh realities of paying the bills each month, Dean Crago and his partner, Hannah, decided to make the shift to green living. It began with a 1979 Bedford TK Horsebox that was stripped down to its shell and rebuilt. By harvesting solar and wind power, the Horsebox-turned-House Box has a fully equipped sound system, a hot shower, and a full-size Rangemaster stove. A wood-burning stove supplies heat on cold nights and a rainwater filtration system provides crisp, cool drinking water for the couple. A double bed, sofa, and even an office space from which to run their conversion business complete the transformation.
